About sIL-2R

The interleukin-2 receptor (IL-2R) is a monomeric, heterodimeric or -trimeric protein¹ expressed on the surface of certain immune cells like lymphocytes that binds and responds to a cytokine called IL-2².

Interleukin-2 (IL-2) is a body own signaling molecule mainly produced by activated T-cells. It acts on different types of B- and T-cells via the interleukin-2 receptor.

The functional interleukin-2 receptor consists either of two or three protein chains.

The dimeric IL-2R consists of the IL-2R β (CD122) chain and the IL-2R γ (CD132) that form an intermediate affinity receptor for IL-2. If the IL-2 α (CD25) chain is incorporated into the receptor complex the IL-2R attains high affinity for IL-2³.

In the figure below the different ways of IL-2-IL-2R signaling is depicted.

Fig. Binding of IL-2 to distinct compositions of the IL-2 receptor. For effective signaling, cells may either express the dimeric, intermediate-affinity IL-2R composed of the IL-2R β and IL-2R γ chain (A) or the trimeric, high-affinity IL-2R also including the IL-2R α chain (B). The IL-2R α chain can be cleaved off by proteases revealing soluble IL-2R (sIL-2R). Some cells only express the monomeric, low-affinity IL-2R α chain. These cells can present IL-2 in trans to cells expressing the dimeric, intermediate-affinity IL-2R (C). Also sIL-2R has low affinity for IL-2 and can function either as a decoy receptor reducing the bio-availability of IL-2, or by enabling in trans presentation to cells expressing the dimeric, intermediate-affinity IL-2R, with or without the membrane part of the cleaved IL-2R α chain (D)³.

Advantages:

- **Data Integrity:** Calibrated against non-WHO standard NIBSC 97/600
- **Easy to perform with ready-to-use reagents**
- **Quality ensured with 2 kit controls included**

sInterleukin-2-Receptor ELISA - RUO**

** For research use only. Not for use in diagnostic procedures.

Benefits:

- **Do your studies from small scale to high throughput**
- **Increase productivity and efficiency with automated workflow***
- **Adapted on Thunderbolt, DSX, Freedom EVOlyzer****

*The combined use of assays, process script and automate has to be validated individually on site by each laboratory.
